# Draw Raster addon- GP 2D Viewport

Raster drawings precise and accurate controlled with mouse or pen.

Slanted, straight, up, or down. It simply follows the lines

Need more details? No problem.
Grids and subdivisions are, of course, customizable live.

The precision is displayed in mm.

The yellow cross shows you visually how the line starts.

The drawing stops where you stop with the mouse/pen

By default, the line is red,
when you draw.

If that bothers you?
no problem. Let's make it black.

At the moment you can set the preview line to the color of your
choice.

Note:
The preview line disappears once you've finished drawing.

But how do you actually get your first line?

At the top of the UI is "Start Drawing."

Clicking this will activate snapping.

Now you should see a "yellow cross" where your mouse/pen is

If you now hold down the LMB and drag anywhere, you will drag the preview from the selected point along the grid.

And as soon as you release the LMB, the drawn GP line is created
